

## CGTech's Vericut 6 Takes MWP Software Award, Presented at MACH 2008

CGTech Ltd. managing director John Reed (centre) accepts the MWP Best Software Award at ceremonies held during MACH 2008, flanked by TV and radio host Jason Manford (left) and Mori Seiki (UK) Ltd. sales director Steve Finn (right). Mori Seiki (UK) Ltd. sponsored this year's MWP Best Software Award.

Vericut 6 CNC simulation and verification software, the latest release from CGTech Ltd., won this year's MWP Best Software Award. The prestigious Metalworking Production Awards were presented in April during MACH 2008. A hotel in Birmingham, UK, was the site of the awards ceremony. The MWP competition originated 25 years ago, its creators seeing it as a way to recognize outstanding achievement in manufacturing technology in the UK machine tool industries.

The award judges' summary of Vericut 6 included this statement: "In a world of increasing complexity, it enables users to work in a virtual world, knowing that, when it transfers

this into reality, it will do exactly what you expect."

Vericut allows the CNC programmer to simulate, verify, and optimize CNC programmes in a virtual reality environment using an accurate in-process model. Users of the software can optimize feed rates also, adjusting them precisely to the cutting conditions. Vericut can be used stand-alone or integrated with any of today's leading CAM systems, including CATIA, Siemens NX, PTC, Delcam PowerMill, Open Mind *hyperMill*, EdgeCAM, Mastercam, and GibbsCAM.

## Easymetal Prozesstechnik Plans for Growth

Easymetal Prozesstechnik GmbH, the supplier of systems for treating EDM process water, is celebrating its 10th anniversary this year. But celebration is also in order for other reasons. One is the company's recent rapid growth. That business success necessitated Easymetal's plans to move from Stockerau to a more spacious location in Wolkersdorf, still near Vienna. That brand-new facility will accommodate a 50% increase in personnel and will guarantee state-of-the-art production capability with respect to both economic and ecological considerations. These changes will assure customers future advantages in terms of both prices and services, the company says.

The popularity of the best-selling E.KO Ioniser systems can account for part of Easymetal's recent growth. The targeting of new business areas, including the provision of water treatment systems for households, food service, and medical and technical product applications, also has contributed. These business changes have led to a third thing to celebrate: a completely revitalized website that was launched in May.
